

Grant Burley

Cheyenne - more like a ski boat than a 62' vessel that weighs 40 tonnes

Finding a pair of marine diesel engines that would slip into the engine room on board Cheyenne was proving near impossible, until owner Grant Burley looked at the Yanmar 8SY-900 powerplants.

“The old engines on board my 62 Sunseeker had failed so I needed plenty of power in a pretty tight area.

The Yanmar 8SY-900 proved the perfect replacement. In terms of power, economy, torque and low fuel consumption these engines are the very best in their class.

My fuel consumption has been slashed 16% and my cruise range is obviously better too.

The transformation in on-water performance is exceptional. The Yanmar's throw Cheyenne up onto the plane, and the boat charges through turns more like a ski boat than a 62' vessel that weighs 40 tonnes.

And there's no smoke. I am absolutely delighted with Yanmar.”

Grant Burley
MY Cheyenne owner

Yanmar 8SY-900M
900 mhp (662 kW)

- Electronic Unit Injectors
- Twin Turbochargers with Intercooling
- Direct Injection with 4 valves per cylinder
- Electronic Engine Management
- EPA Tier 2 emission compliance
