Joe Spiteri

More Power, Faster & Less Fuel

Recreational fisherman Joe Spiteri decided to upgrade his 1991 Caribbean flybridge cruiser with a pair of fresh engines. So the original 170hp petrol sterndrives came out and were replaced by a pair of fresh Yanmar 4 cylinder, 2 litre, turbo charged and intercooled 4BY 180Z diesel sterndrive packages.

“The difference in performance and fuel savings has been nothing short of amazing.

My old engines would burn 310 litres of petrol over 10 hours of offshore fishing. With my new Yanmars I can do the same trip and burn just 120 litres of diesel. That’s a saving of nearly two thirds!

And my Yanmar is even using less fuel than my mates running a 220hp four stroke outboard.

With my new Yanmar 4BY engines I can push the 3.6 tonne boat up to 40 knots – previously my top speed was 28 knots.

My fishing has become so much more enjoyable thanks to Yanmar.
