

## Switch On To Efficient Onboard Power 230V, 50Hz – For Comfort & Convenience

The KMG65E generator fits between engine and transmission  
Choose one or two remote power boxes at 3kW each (230V, 50Hz)

### Enjoy Being Aboard To The Full

The Powerful Gem

This is the ultimate in economical, efficient power generation for sailboats, luxury sloops and powered craft. Yanmar's new lightweight KMG65E system fits compactly between the engine and gearbox or saildrive. You can benefit from enough electricity, for example, to run air conditioning, kitchen equipment, a computer, television and music centre. The boat's batteries can be charged as well – all irrespective of engine speed or load. And the KMG65E is lower in price and takes up less space than a standard generator. Designed specifically for use with Yanmar 3JH4 (39MHP) and 4JH4-AE (54MHP) diesel engines.
