

## 4 Times Smoother with New Release Gori

Gori Propeller has proudly supported the global sailing industry by manufacturing low-drag folding propellers since 1975. In 2005, Gori celebrated three decades of design excellence and to mark the occasion has released a new 4-blade folding propeller to suit bigger yachts and larger engine applications.

Left to Right: Lars Pedersen (Area Sales Manager Northern Europe, Americas and Australasia), Aksel Andresen (Sales Manager Gori propeller Méditerranée), Inge-Lise Helskov (Sales), Sune Ehrenskjöld (Technical Manager) and Steen Kaasgaard (Managing Director)

The new Gori 4-blade propeller made its debut at the November Marine Equipment Trade Show (METS) in Amsterdam. METS is the premier European exhibition of equipment, materials, systems and services for the international leisure craft trade and industry.

The new release Gori 4-blade propeller opens up entirely new levels of sailboat performance for larger yachts which, in the past, had been reserved for smaller vessels. Now it is possible for large sailboats and motorsailers to harness full-speed advantages under sail of a folding propeller whilst reaping the thrust capability of a 4-blade when motoring.

Meeting an ever increasing demand for high performance folding propellers, Gori Propeller designed the new 4-blade prop in sizes from 22" through to 38" covering engine with power ratings up to 500 horse power.

One of the main advantages of the Gori folding propeller is the ability to adjust the profile and pitch of the blades while motoring resulting in an "overdrive"

operation. By using the overdrive feature, the propeller can be optimised to achieve the same speed at fewer revs giving greater fuel efficiency, less vibration and less engine noise.

The drag minimising benefits of the Gori 4-blade propeller have been evident for 3 decades. Not only can the new release Gori 4- blade propeller be applied to larger vessels and bigger engines, it also reduces the chances of catching seaweed therefore allowing the vessel to achieve maximum speed without drag resistance.

Stringent quality control has been the hallmark of Gori Propeller success with the development of the new 4-blade propeller continuing in vintage Gori fashion. During the manufacturing process, each propeller is given a number and a logbook during production to ensure all products comply with quality standards.

Australia's passionate sailing and motor yacht community is set to embrace the new release model from Gori Propeller. Delivering full-speed hull performance, quieter operation and greater fuel efficiency, the new Gori 4 blade folding propeller is destined to become a popular amongst the big boat market in Australia.

Gori Propellers are proudly distributed in Australia through Melbourne-based Power Equipment, the same company that markets and distributes the Yanmar brand of marine diesel engines.
